

A photograph of a wet, paved street in a historic urban area. The street is lined with tall, dark-colored buildings featuring traditional architectural details like arched windows and balconies. In the foreground, several yellow traffic cones are placed along the curb, likely marking a pedestrian zone or a specific area of interest. The street surface is made of grey cobblestones. A few people are visible walking on the sidewalk. The overall atmosphere is quiet and suggests a recent rain.

## En casos de pena capital, Kaine reveló Conflicto Interno

Por Sheryl GAY STOLBERG y THOMAS KAPLAN

• compañero de fórmula de Hillary Clinton, el senador Tim Kaine, presidió 11 ejecuciones como gobernador de Virginia, mientras que la concesión de indulto sólo una vez.

• A pesar de sus objeciones religiosas a la pena capital, echó sus decisiones en términos simples: que había jurado defender la ley.

• Como recogida para el N° 2, Kaine ve regalos bajo escrutinio Hace 30 minutos

## Core Technologies

### Motion Tracking

Motion tracking allows a device to understand position and orientation using Tango's custom sensors. This gives you real-time information about the 3D motion of the device.

### Area Learning

Tango devices can use visual cues to help recognize the world around them. They can self-correct errors in motion tracking and relocalize in areas they've seen before.

### Depth Perception

Depth sensors can tell you the shape of the world around you. Understanding depth lets your virtual world interact with the real world in new ways.

## Meet our APIs

### Unity SDK

The Unity SDK is great for making games and other programs requiring 3D visualization if you don't already have an existing or preferred rendering engine. We provide scripts, components, prefabs, and demo programs in our Unity packages.

[GET STARTED WITH THE UNITY SDK](#)

### Java API

The Java API is ideal for integrating Tango functionality into applications built with the standard Android Java APIs. Developers who are already familiar with the Android Java development environment should be able to easily adjust.

### C API

Developers working with the Android NDK should use the C API, which enables flexibility on the native level. Use the C API if you have your own visualization engine to display Tango's 3D capabilities, or want to access the system-level pose and depth information directly.
